

FEFCO CODE

© 2022, 12ª EDIÇÃO

O código FEFCO é o sistema reconhecido internacionalmente para a classificação de designs de embalagens de papelão ondulado. Ele contém designs dos tipos de caixas mais comuns com um número de código anexado a cada design, simplificando o processo de identificação.

PUBLICADO POR FEFCO

PDF INTERATIVO

A versão digital deste documento possui links interativos para ajudar a localizar rapidamente o design certo. Use o índice para acessar cada série de códigos, clicando na(s) imagem(s) em miniatura na visão geral.

- O pequeno logotipo da Fefco em cada página o levará de volta à página de conteúdo.
- O número no canto superior direito levará de volta à visão geral do código.

Código FEFCO – Biblioteca de estilos de design para produtos de papelão ondulado

O primeiro Código foi desenvolvido na década de 1960 pela FEFCO e ESBO (antiga ASSCO) como um sistema de código numérico para caixas de papelão ondulado para evitar confusão na comunicação em diferentes idiomas. Esta é a 12ª edição do Código, ampliada com novos desenvolvimentos.

Como as caixas de papelão ondulado se desenvolvem continuamente, é impossível descrevê-las todas neste catálogo. Outros estilos, juntamente com designs personalizados para atender a requisitos específicos, são sempre possíveis.

Referências a este Código podem ser utilizadas em pedidos, especificações ou publicações. Quaisquer acréscimos ou modificações são permitidos somente pela FEFCO.

símbolos usados em desenhos e sistemas de computador

símbolo de desenho cortes, pontuações, fendas etc.	descrição
	contornos de caixas montadas ou linhas de corte de peças em bruto
	linhas de vinco
	linhas de corte parcial
	linhas de perfuração
	linhas de fita
	linhas rasgadas

dimensões da caixa

Todas as dimensões são expressas como dimensões internas em mm da seguinte forma:

Comprimento (C) x Largura (L) x Altura (A)

Comprimento (L): Dimensão maior na abertura

Largura (W): Menor dimensão na abertura

Altura (H): Dimensão do topo da abertura até a base

Variável (v): Uma dimensão variável definida pelos atributos de design

As dimensões L, W, H e v são especificadas em cada descrição da construção da caixa, para alguns projetos o valor numérico de W pode exceder o valor numérico de L. As dimensões devem ser medidas sob condições climáticas padrão (23°C e 50% de umidade relativa de acordo com a norma EN 20187), na peça plana a partir do centro do vinco com a espessura de o material em mente.

Para casos com retalhos externos sobrepostos, o comprimento da área de sobreposição (o) deve ser dado como uma quarta medida após um traço oblíquo, ou seja

355x205x120/40mm
(L) (W) (H) (o)

dimensões da folha

Salvo indicação em contrário, as dimensões de uma chapa ondulada são expressas em mm da seguinte forma:

1ª dimensão x 2ª dimensão

1ª dimensão – ao longo das linhas de cola da flauta

2ª dimensão – através das linhas de cola da flauta

versões de estilo

Vários tipos de casos podem ter versões derivadas sem a necessidade de criar um novo estilo. Neste caso deve ser adicionado um sufixo ao número do estilo básico, separado por um ponto.

Exemplo: **0201.2**

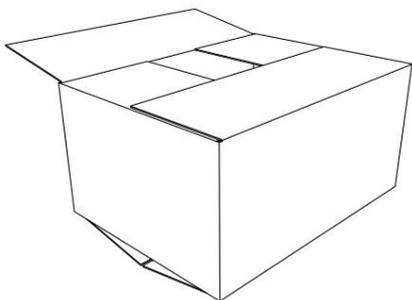

Uma versão pode ser exclusiva para fabricantes individuais.

estilos e a união dos fabricantes

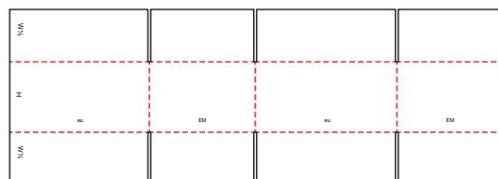

Os layouts de estilo de desenho mostrados neste Código podem precisar ser reorganizados dependendo da junta escolhida pelo fabricante. Alguns estilos podem ter uma junta do fabricante que pode ser colada, costurada ou colada com fita adesiva. Uma junta colada ou costurada pode ter uma extensão tanto para o painel curto quanto para o longo. O sufixo padrão pode ser adicionado ao nome do código para determinar "G" para caixa colada e "S" para caixa costurada, por exemplo, 0201-G.

As configurações do painel podem ser visualizadas de maneiras alternativas para se adequar à capacidade de fabricação. As costuras de junção podem ser posicionadas no lado esquerdo ou direito de qualquer estilo, que pode ser um painel longo ou curto. Qualquer painel de junta pode ser estendido acima e/ou abaixo da configuração de profundidade padrão de um estilo de junta.

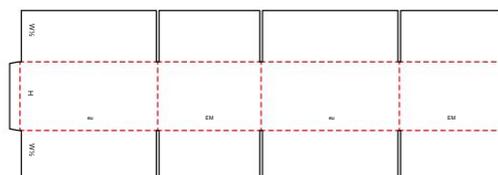

Exemplo: **0201**

Junta gravada

Junta colada ou costurada

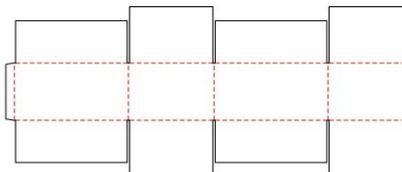

Isto se aplica a todos os projetos deste Código.

combinações de estilos

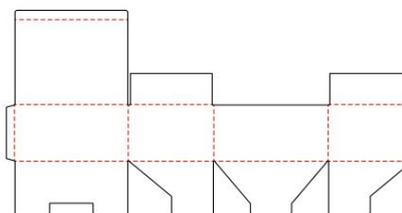

Os estilos de construção mostrados são dos tipos básicos de caixas de papelão ondulado. Se a construção final for uma combinação de dois ou três modelos básicos, por exemplo, arranjos de abas, eles também poderão ser descritos da seguinte forma:

Abas superiores como 0204, abas inferiores como 0215

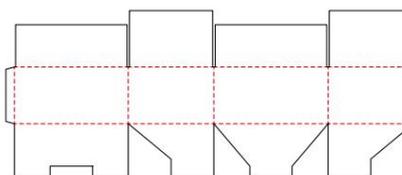

0204

0215

0204/0215

Este tipo também pode ser descrito como 0204/0215 (abas superiores/abas inferiores).

montagem manual ou automatizada

Cada estilo de design inclui uma das seguintes indicações:

M: geralmente ereção manual

A: ereção geralmente automatizada

M/A: pode ser montagem manual ou automatizada

Estas indicações baseiam-se na prática actual e destinam-se a fornecer informações adicionais para especificações e utilizadores. Algumas caixas montadas manualmente podem ser fechadas automaticamente (ex: 0216 ou 0712).

Descrição da série de estilo básico

OS TERMOS CAIXA, RECIPIENTE E CAIXA SÃO INTERCAMBIÁVEIS

observação geral

Observe que vários designs de caixas contidos no Código sob um número específico também podem ser classificados em outras séries de estilo básico.

01 - Rolos e folhas comerciais

02 – Caixas com fenda

As caixas com fenda consistem basicamente em uma peça com uma junta de fabricante colada, costurada ou gravada e abas superior e inferior. São enviados planos, prontos para uso e necessitam de fechamento com as abas fornecidas.

03 – Caixas telescópicas

As caixas telescópicas geralmente consistem em mais de uma peça (por exemplo, parte superior e inferior) e cabem umas sobre as outras.

04 – Caixas pastas e bandejas

Caixas de pastas e bandejas geralmente são feitas de um único pedaço de papelão. O fundo da caixa é articulado para formar duas ou todas as paredes laterais e a tampa. Abas de travamento, alças, painéis de exibição, etc. podem ser incorporados em alguns designs.

05 – Caixas de slides

As caixas deslizantes consistem em várias peças de revestimentos e mangas que deslizam umas nas outras em diferentes direções. Este grupo também inclui mangas externas para outros casos.

06 – Caixas rígidas

As caixas rígidas consistem em duas peças finais separadas e um corpo que requer costura ou operação semelhante antes de poderem ser usadas.

07 – Estojos prontos colados

As caixas já coladas consistem basicamente em uma peça, são enviadas planas e prontas para uso por meio de montagem simples.

08 - Embalagens para varejo e e-commerce

A categoria de embalagens de varejo e comércio eletrônico mostra os estilos típicos usados para displays e bandejas de ponto de venda (PDV), bem como estilos para o comércio on-line.

09 - Acessórios interiores

Acessórios internos, como revestimentos internos, almofadas, divisórias, divisórias, etc., sejam integrados no design da caixa ou como itens separados. Qualquer número de painéis mostrado é arbitrário e pode ser aumentado ou diminuído conforme necessário.

escrita do código de estilo

CÓDIGO COMPLETO: XXXX.XXXX

estilo XXXX	versão de estilo .XXXX
A forma/design padrão reconhecido deste código.	O número da versão diferenciar a variação do projeto padrão (correspondente a um desenho individual ou biblioteca CAD/CAM).

Fechamento de caixas

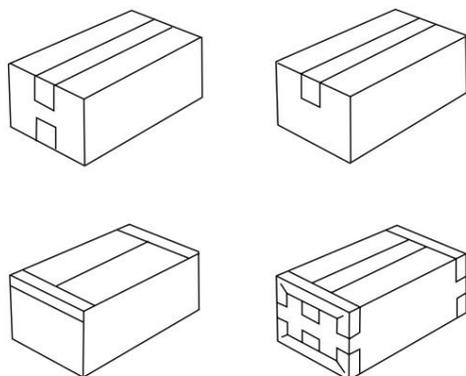

O fechamento correto e eficaz da embalagem é tão importante quanto a própria construção da embalagem.

Os seguintes métodos de fechamento são possíveis isoladamente ou em combinação:

- por colagem, fria ou quente
- gravando
- por intertravamento
- costurando

fechando com gravação

Isso pode ser feito de acordo com os exemplos mostrados.

fechando com costura

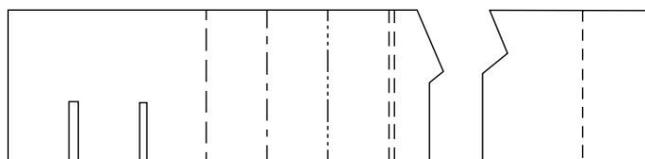

Isso pode ser feito de acordo com os exemplos mostrados.

Codificação de acessórios interiores

A seguinte gama de acessórios interiores pode ser codificada dependendo do número de painéis utilizados, em qualquer combinação de formas (para sistemas informáticos).

ACESSÓRIOS INTERNOS

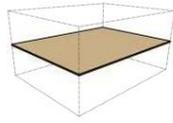

Acessórios internos, como revestimentos internos, almofadas, divisórias, divisórias, etc., sejam integrados no design da caixa ou como itens separados. Qualquer número de painéis mostrado é arbitrário e pode ser aumentado ou diminuído conforme necessário.
